

Conex collaboration software is used to coordinate health and medical care, and medical information for a wide variety of healthcare related providers, as well as for patients and their family members.

Using integrated video, audio, text and fax components, Conex assists a variety of proactive providers and provider organizations that understand the value of coordinating care and cost effectiveness of keeping patients and their family members informed.

The software is **Custom Branded** for market identification. This *Software as a Service* telemedicine platform is **HIPAA Compliant**. Our easy to deploy, easy to learn and universally available program bridges the gap between all Practice Management Systems and can feed into Electronic Medical Record Systems.

Feature	Benefit
